ABSTRACT [ARIAL NARROW, 11 PT]

Abstracts are written in English a maximum of 250 words using Arial Narrow size 11 pt, and space 1. Abstract is short, clear, and concise information related to the research topic, objectives, research methods, and research results. Keywords should represent the concept of the article and make it easy for search engines. Abstract is expected to be more communicative and not monotonous.

Keywords: written in lowercase letters consisting of 3-5 keywords, size 11 pt.

INTRODUCTION

The author's name, institution name, institution address, and author's email are written in Arial Narrow font, font size 12 pt. If the author is more than 1, then provide the sequence number and write the e-mail address: corresponding author. Keywords should represent the concept of the article and make it easy for search engines. The number of pages is not more than 15 sheets with A4, single side paper format. All fonts in this article are written in Arial Narrow and foreign language writing must be italicized. Before writing, make sure your margin paper fits this margin template.

*This research article consists of **TITLE, ABSTRACT, INTRODUCTION, METHOD, RESULTS AND DISCUSSION, CONCLUSIONS, REFERENCES**. After the keyword is immediately filled with an introduction which includes the background, problems, and objectives of the research benefits. The introduction written after the keyword must be accompanied by a reference / citation as a theoretical basis for the research problem. Reference writing should use applications such as **Mendeley, Zotero, Endnote, etc. and use the APA style format**. The minimum number of references in research articles is **15 references** with publications of the last 10 years taken from National / International scientific journals and have good credibility. The results and discussion are presented in an integrated manner and reviewed from various previous related theories.*

*The font type used in the content of the article is **Arial Narrow measuring 12 pt, space 1 and text align format must be justify**. The easiest way to write your paper is to be directly customized with this JMST template.*

} [Space 1]

METHOD [ARIAL NARROW, 12 Pt]

The method contains explanations in paragraph form such as descriptions of experimental settings, data sources, data collection techniques, and data analysis carried out by researchers. Writing

formulas or mathematical equations using equations with the letters Cambria Math, 12 pt and each mathematical formula equation must be written a sequence number like the following example.

$$f(x) = ax + b \quad (1)$$

If there is a Sub chapter in the research article then use the Sub Chapter title as below.

} [Space 1]

Sub Chapter 1 Headings

Contents of subchapter 1

} [Space 1]

Sub Chapter 2 Headings

Contents of subchapter 2

} [Space 1]

RESULTS AND DISCUSSION [ARIAL NARROW, 12 PT]

Results and discussions contain data, data analysis, and interpretation of results that are presented in detail and ordered. Results can be tables and graphs that are annotated after the tables and graphs are presented. This section must answer the problems that have been formulated at the beginning. The format of tables, graphs, and figures can be viewed as follows:

} [Save 1]

Table 1. Alpha (α), beta (β) and gamma (γ) parameter values

Model Tentative	Parameter		
	alpha (α)	Betta (β)	Range (γ)
Model 1	0,10	0,10	0,10
Model 2	0,10	0,20	0,30
Model 3	0,20	0,20	0,20
Model 4	0,20	0,30	0,40
Model 5	0,30	0,40	0,50
Model 6	0,40	0,50	0,60
Model 7	0,01	0,09	0,30
Model 8	0,10	0,09	0,30

Source.. (when quoting from other sources please include)

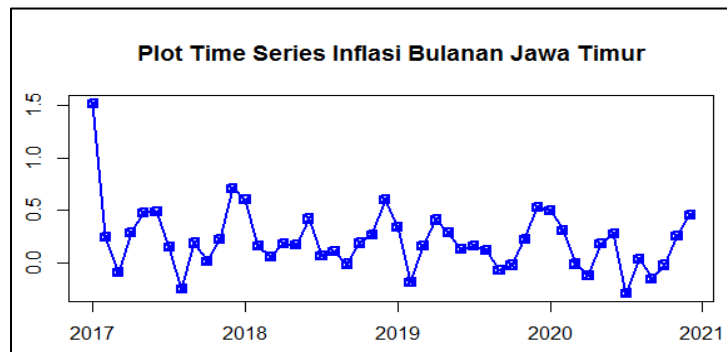

Figure 1. Monthly Inflation Time Series Plot East Java
Source.. (when quoting from other sources please include)

} [Save 1]

Every table, graph and figure presented should be given a clear explanation of the purpose of the table, graph and figure, for example by using the sentence "Based on figure 1 it can be explained that so".

} [Save 1]

CONCLUSION

The conclusion is presented in paragraph form and should clearly state the main findings of the study and provide explanations related to its importance and relevance. The conclusion answers existing hypotheses, research objectives, research findings, and contains suggestions related to further ideas from the research that has been done.
